ATTAIN INSIGHT & IBM PARTNERSHIP

For IBM Identity Insight & Global Name Management Customers

NEW FEATURES

In partnership with IBM, Attain Insight is introducing new features for Identity Insight, as part of our Identity and Relationship Solution, Intrinsic™:

1. Privacy Protection
Enables organizations to anonymize user identity information, including everything from driver's licenses to facial recognition biometric data to enable sharing of sensitive data with other organizations to find what is in common without revealing a person's identity.

2. Access Control
Many organizations manage separate projects for their various sensitive initiatives. This has the disadvantage of making it more difficult to leverage relationship information known to other parts of your organization or other organizations. With Access Control now built into the project, a common repository can support multiple sensitive and separate projects at once (from singular relationship data stores).

3. Location Intelligence
With the increasing availability of time and place information, location intelligence is increasing. Attain Insight is adding services that allow location and time data sources to be more easily fed directly into Identity Insight.

IBM IDENTITY INSIGHT 10.0 TRAINING

Training for End Users

✓ **Duration: 3 Days**

✓ **Course Overview:**

Intro to Identity Insight from an end-user perspective followed by topics including searching, navigating, visualizing, evaluating relationships, and creating and managing alerts.
