

Attain Insight Intrinsic

Solve cases faster with automated intelligence collection and processing

Intrinsic offers innovative technology to anonymize sensitive information, including biometrics, while preserving search capabilities. This allows agencies to collaborate and broaden surveillance efforts while staying compliant with privacy obligations.

OVERVIEW

Attain Insight Intrinsic™ is a powerful identity management solution that uses the latest in algorithmic advancements to integrate biometric and non-biometric data sources, including ALPR and facial recognition, to uncover hidden relationships and associations between individuals, entities, and known persons of interest.

FEATURES

Intrinsic enables law enforcement to:

- Identify suspects who use multiple identities
- Detect coordinated activities and connections between suspects and vehicles
- Uncover hidden networks of organized crime and fraud
- Anonymizes Personally Identifiable Information (PII), including facial recognition and other biometric data, while preserving high-fidelity match capabilities

BENEFITS

AUTOMATED INTELLIGENCE

Continuous automatic processing of incoming data, including biometrics, to keep relationship insights up to date and accelerate case resolution.

BROADER SURVEILLANCE

Leverage anonymized surveillance data to expand relationship intelligence and uncover organized crime, while protecting privacy where needed.

INTERAGENCY COLLABORATION

Instantly establish the existence of relevant intelligence in other agencies to enable faster and more effective multi-agency collaboration.
